REP ID:	A53	LAST RUN:	22/08/10
		SIZE:	20X3

...THE SEVEN DEADLY SINS OF TYRE WEAR

- 1. AIR PRESSURE** - one of the major problems for excessive wear having the right pressure saves tyre life & fuel...just ask (John Key)
- 2. WHEEL ALIGNMENT** - should be checked yearly incorrect alignment causes the vehicle to wear tyre quickly & makes handling dangerous.
- 3. TYRE ROTATION** - Modern vehicles tend to wear the front tyres more quickly by rotating your tyres you get more life out of the tyre.
- 4. BALANCE** - if your car shakes or vibrates your tyres could be damaged or old , get them checked quickly as this can cause blowouts.
- 5. QUALITY** - Major branded tyres spend millions on Research & Development so they can cope with modern vehicle technology. Tests have proved that major brands stop better & last longer.
- 6. RIGHT TYRE** - you wouldn't go mountain climbing in ballet shoes the same with tyres, your vehicle is made to do certain things, match the tyre to the vehicle.
- 7. PRICE** - don't skimp on price your far better off in the long run, getting longer life & safer tyres for a few extra dollars.
